							26	30	

\* Letter grades to be awarded.

#### Semester VII

S.No.	Semester	Course Code		Course Name	Category	Type	Credit	L-T-P
1	VII	CSS401		Training Seminar	PC	Theory	2	0-2-0
2	VII			Management	PC	Theory		
3	VII			Open Elective I	OE	Theory		
4	VII			Open Elective II	OE	Theory		
5	VII			Program Elective I	PE	Theory	4	3-0-2
6	VII			Program Elective II	PE	Theory	4	3-0-2

#### Semester VIII

S.No.	Semester	Course Code		Course Name	Category	Type	Credit	L-T-P
1	VIII			Management	PC	Theory		
2	VIII	CSD402		Major Project	Projec	Theory		
3	VIII			Open Elective III	OE	Theory		

4	VIII			<i>Open Elective IV</i>	OE	Theory		
5	VIII			Advanced Program Elective I	AEC	Theory	4	3-0-2
6	VIII			Advanced Program Elective II	AEC	Theory	4	3-0-2

#### Advanced Elective Courses

S.No.		Course Code		Course Name				
		CST432		Topics in Data Structures and Algorithms				
		CST434		Parallel and Distributed Computing				
		CST436		Selected Topics in Operating System				
		CST438		Advanced Topics in Computer Graphics				
		CST440		Advanced Topics in Databases				
		CST442		Network Performance Modelling				
		CST444		Software Testing and Validation				
		CST446		Topics in SOC Design				
		CST448		Advances in Compiler Design				
		CST450		Wireless Sensor Networks				
		CST452		Digital Image Analysis				
		CST454		Data Mining and Data Warehousing				
		CST456		Topics in High Speed Networking				
		CST458		E-Commerce				
		CST460		High Level Synthesis of Digital Systems				
		CST462		Parallelizing Compiler				
		CST464		Public Key Infrastructure and Trust Management				
		CST466		Selected Topics in Cryptography				
		CST468		Robotics and Control				
		CST470		FPGA based System Design				
		CST472		Security in Computing				
		CST474		Intelligent Agents				
		CST476		Critical Systems				
		CST478		Pattern Recognition				

		CST480	Biometric Security				
		CST482	Computer Forensics				
		CST484	Semantic Web				
		CST486	Intrusion Detection				
		CST488	Internet Security				
		CST490	Malware Analysis and Detection				

### Program Electives

S.No.		Course Code	Course Name				
		CST433	Wireless Communications				
		CST435	VHDL				
		CST437	Neural Networks				
		CST439	Speech Recognition				
		CST441	Software Project Management				
		CST443	Data Compression				
		CST445	Natural Language Processing				
		CST447	Wireless & Ad-hoc Networks				
		CST449	Real Time Systems				
		CST451	Cryptography				
		CST453	VLSI Algorithms				
		CST455	Digital Image Processing				
		CST457	Evolving Architectures				
		CST459	Topics in Computing				
		CST461	Machine Learning				
		CST463	Modelling and Simulation				
		CST431	Programming in Java				
		CST465	Python Programming				
		CST467	Multimedia Technology				
		CST469	Computer Human Interaction				

**B.Tech (Computer Engineering) - Semester III**

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST201</b>	<b>Course</b>	<b>Logic in Computing</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>3-0-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Logic: Introduction to Logic, Propositional Logic and Predicate Logic</p> <p>Propositional logic: Elements, Truth table, Declarative sentences, Construction of Proposition, Converse and Contrapositive, Reasoning with Propositions, Natural deduction – rules, Provable equivalence, Semantics, logical connectives, Soundness and completeness of propositional logic, Normal forms, Identities of Propositions and Dual, Use of Identities, Implications, Reasoning with Propositions, Proof of Identities, Proof of Implications, Semantic equivalence, satisfiability and validity, Conjunctive normal forms.</p> <p>Predicate logic: Terms, Formulas - Well Formed Formula (WFF) of Predicate Logic, Constructing Formulas; Free and bound variables, Reasoning with Predicate Logic, deduction rules, Quantifier, Semantics, Undecidability of predicate logic, Expressiveness, second-order logic.</p> <p>Verification: Linear-time temporal (LTL) logic, Syntax and Semantics, Model checking: systems, tools, properties, Branching-time temporal logic - Syntax and Semantics of CTL, Model-checking algorithms</p> <p>Program verification: Partial and total correctness, Proof calculus, Modal logic – syntax and semantics, Binary decision diagrams.</p>		
<b>Books:</b>	<p>Michael Huth, Mark Ryan: Logic in Computer Science: Modelling and Reasoning about Systems, Cambridge University Press.</p>

### B.Tech (Computer Engineering) - Semester III

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST203</b>	<b>Course Name:</b>	<b>Data Structures and Algorithms</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-1-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Introduction to data structures, dynamic aspects of operations on data, analysis of algorithms.</p> <p>Creation and manipulation of data structures: arrays, lists, stacks, queues, trees – binary, threaded, multiway; heaps, height balanced trees, graphs, hashing and hash tables, dictionaries, tries.</p> <p>Algorithm approaches: greedy, dynamic programming, divide and conquer, branch and bound, introduction to complexity analysis and measures.</p> <p>Algorithms: sorting and searching, merging, tree and graph traversals, shortest path, minimum spanning tree, order statistics, string matching.</p> <p>Selected topics: computational geometry, emerging areas.</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. Kruse R.L., Data Structure and Program Design, PHI.</li> <li>2. Rivest, Cormen, Introduction to Algorithms, MIT Press</li> <li>3. Horowitz and Sahni: Data Structure in C++ , Glagotia</li> <li>4. Ellis Horowitz, Sartaj Sahni, Fundamentals of Data Structures</li> <li>5. Aaron M. Tenenbaum, Y. Langsam, Moshe J. Augenstein, Data Structures Using C</li> </ol>		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	
<b>Date:</b>			

**B.Tech (Computer Engineering) - Semester III**

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST205</b>	<b>Course</b>	<b>Digital Logic Design</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-1-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Boolean algebra: Binary connectives, Evaluation of truth functions, Duality, Simplification of Boolean expressions.</p> <p>Realisation of Logic Circuits: Minterm, Maxterm, Karnaugh maps, incompletely specified functions, simplification. Quine-Mckluskey's tabular method, prime implicants, map and tabular minimization of multiple output circuits.</p> <p>Combinational and Sequential circuits: Adders - Ripple carry, Carry look ahead, Carry select, carry save; subtraction, encoder/decoder, multiplexer, demultiplexer, parity checker and generator. Latches, Flip Flops : JK, SR, D Type and T type Flip Flops; Shift registers, Counters - Ripple, decade, up-down counters, Mod-<i>n</i> counters, Multiplication - Add and Shift method, Booth's Multiplier, m -Array Multiplier, Division - Restoring/Non restoring method..</p> <p>Clock, pulse and level mode sequential circuits; Analysis and design of sequential circuit. Synthesis of state diagrams, finite memory circuits, equivalence relations, equivalent states and circuits, simplification by implicant tables. Mealy and Moore machines, state assignment and memory element input equation, General pulse-mode circuits, clock input counters, extended state tables.</p> <p>Asynchronous Mode Circuits: Analysis of a fundamental mode circuits, Synthesis of flow tables, minimization, transition tables, excitation maps and output maps, Cycles and Races, Race free assignments, Hazards in sequential circuits.</p> <p>Introduction to A/D and D/A converters. Sampling and Quantization.</p>		
<b>Books:</b>	<p>1.Digital Systems and Hardware and Firmware Algorithms: M.Ercegovac and T. Lang, Pearson.</p> <p>2.Hill &amp; Peterson: Switching Theory and Logic Design, John Wiley</p> <p>3.J.F.Wakerly: Digital Design, Principle and Practices, Pearson.</p>

### B.Tech (Computer Engineering) - Semester III

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST207</b>	<b>Course Name:</b>	<b>Programming Methodology</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>3-0-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Introduction to flow charts, programming paradigms.          Abstractions in programming languages. Declarations, variables and constants, data types, arithmetic expressions, statements, precedence and associativity of operators. User-defined data types, data abstraction, array, records, character string, variable size data structure, pointer and reference types, design and implementation uses of these types, type checking and type conversion.          Control constructs – branching and looping, relational and boolean expressions, conditional execution and iteration, exception handling.          Sub-programs, procedures and functions, parameter passing mechanism, scope and lifetime of variables, environment, activations, and allocation.          Recursion and recursive functions, Co-routines and scheduled subprograms, task and concurrent exception.          Name and referencing environments, static dynamic and block structures.          Dynamic and static scope of shared data. Block structure, parameters and their transmission.          Dynamic memory management. Storage management: Static, Stack, Heap (Fixed/variable size), File processing, debugging strategies.</p>		

<b>Books:</b>	<i>Ghezzi and Jazayeri: Programming Language Concepts, .</i> <i>Sethi Ravi: Programming Language Concepts &amp; Constructs, Addison Wesley</i> <i>Louden: Programming Languages- Principles and Practice, Cengage Learning.</i> <i>Friedman and Wand: Essential of Programming Languages, PHI.</i> <i>Sebasta: Concept of programming language, Addison Wesley</i> <i>Pratt: Programming language design and implementation PHI.</i>

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST209</b>	<b>Course Name:</b>	<b>Introduction to Signals and Communication</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-1-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			

<b>Syllabus</b>	<p>Signals: representation, Sampling and aliasing; quantization, Review of Fourier, Laplace and z-transform; Linear Time Invariant System Filters: Transfer functions, FIR filters, IIR filters; Spectrograms; Spectral analysis: DFT for periodic and non-periodic signals, FFT.</p> <p>Analog Communication: Signal modulation, FM, PM, SSB, VSB. Frequency Division Multiplexing and Time Division Multiplexing.</p> <p>Digital Communication: Pulse transmission over Band limited signals, sampling theory; Pulse Modulation - PAM, PCM, DPCM, DM, ADM, metrics - bit transmission, signaling rate, error probability, S/N ratio, bandwidth requirement. Modulation: PSK, FSK, QPSK (QAM), MSK.</p> <p>Transmission Media: Guided and Unguided Media, Transmission Impairments, Multiplexing, Switching: Circuit, Message, Packet, Datagram, Virtual Networks, DSL. Fiber Optic Communication : Principles of light communication in fiber, losses in fiber, dispersion, light source and detectors, multiple access – TDMA, FDMA, CDMA.</p> <p>Codes : Information theory, Shannon's theorem, Source coding, error control coding, Block codes, Cyclic codes, Linear code, checksum.</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. Oppenheim , Willsky: <i>Signals and Systems</i> , Prentice Hall.</li> <li>2. <b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-1-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Algorithm Analysis: Asymptotic notation, solution of recurrence, model of computation, time and space complexities, average and worst case analysis, Amortized analysis. Algorithm Design Techniques: Greedy algorithm, dynamic programming, divide and conquer, backtracking, branch and bound.</p> <p>Graph Algorithms: Shortest path algorithms, Disjoint set operations, minimum spanning tree algorithm, network flow, matching, coverings, applications of DFS:- bi-connectivity, Euler circuits, strongly connected components, topological sort, and articulation point. Matrix Algorithms – Strassen Matrix multiplication, LUP decomposition.</p> <p>Construction of codes: Shannon Fano and Huffman codes.</p> <p>Dynamic Programming: Chained matrix multiplication, longest common subsequence. Divide and Conquer: Order Statistics – finding the median, exponentiation, matrix multiplication, LCS. Computational Geometry: Line segments, Optimal polygon triangulation. Approximate Algorithm: Travelling Salesman Problem, vertex-cover problem.</p> <p>Primality testing, Integer factorization, Randomized algorithms, Probabilistic algorithms. String Matching algorithms: Rabin Karp, KMP, Boyer Moore.</p> <p>Introduction to problem classes – NP, NPC, NP-Hard.</p>		
<b>Books:</b>	<p>1.Cormen, Leiserson, Rivest: Introduction to Algorithms, Prentice Hall of India.  2.Horowitz and Sahani: Fundamental of Computer algorithms.  3.Aho A.V , J.D Ulman: Design and analysis of Algorithms, Addison Wesley  4.Brassard : Fundamental of Algorithmics, PHI.  5.W.W. **B.Tech (Computer Engineering) - Semester IV**

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>HST202</b>	<b>Course Name:</b>	<b>Economic Environment</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>2-1-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			

<b>Syllabus</b>	<p>Economic growth &amp; development; primary, secondary and tertiary sectors; structural changes &amp; emerging sectors of the Indian economy.  National Income; concepts &amp; measurement; circular flows of income.  Review of five year plans in India, planning strategy and objectives.  Current trends in industrial growth, industrial and licensing policy, growth of private sector, problems of public sector units, policy changes for industrial growth; environment for the SME sector.  Design and strategy of economic reforms and liberalization: India's growth post liberalization.  Main trends in imports and exports, balance of payments in recent years, environment for foreign capital and investment.  Intellectual property rights and R &amp; D environment.  Banking reforms and challenges; business opportunities in the rural sector.  Monetary &amp; Fiscal Policies; meaning, importance &amp; instruments.  Global economic environment and opportunities.</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1) Ishwar C. Dhingra, "The Indian Economy: Environment and Policy", Sultan Chand, New Delhi</li> <li>2) H. L. Ahuja, "Economic Environment of Business: Macroeconomic Analysis", Sultan Chand, New Delhi</li> <li>3) Amartya Sen &amp; Jean Dreze, "INDIA: Development and Participation", Oxford University Press, India</li> <li>4) S. K. Mishra &amp; Puri, "Development Issues of Indian Economy", Himalaya</li> <li>5) Ahluwalia, I.J. &amp; IMD Little, "India's Economic Reform and Development", Oxford University Press, India</li> </ol>

#### B.Tech (Computer Engineering) - Semester IV

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CSP212</b>	<b>Course Name:</b>	<b>Assembly Language Programming Lab</b>
<b>Credit:</b>	<b>2</b>	<b>L-T-P:</b>	<b>0-0-3</b>
<b>Version:</b>	<b>Approved on:</b>		
<b>Pre-requisite Course :</b>			

<b>Syllabus</b>	Programming assignments on microprocessor kits (8085, 8086), FPGA programming, Programs on ARM processor, mini-emulator		
<b>Books:</b>	Text/Reference books of "Microprocessors and Computer Organization" Online material on Assembly Language programming.		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	

#### B.Tech (Computer Engineering) - Semester IV

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CSP214</b>	<b>Course Name:</b>	<b>Algorithms Lab</b>
<b>Credit:</b>	<b>2</b>	<b>L-T-P:</b>	<b>0-0-3</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	The following proposed are broad guiding areas lab. The instructor offering the course can adopt further variations. Implementation of graph algorithms – DFS, Shortest Path, MST, articulation point, topological sorting, Network Flow, matching, covering; pattern matching algorithms; kth shortest number in a given sequence; Dynamic programming; Approximation algorithms for NP problems; Randomized algorithms implementation.		
<b>Books:</b>	Text/Reference books of "Design and Analysis of Algorithms"..		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	

#### B.Tech (Computer Engineering) - Semester IV

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CSP216</b>	<b>Course Name:</b>	<b>System Programming Lab</b>

<b>Credit:</b>	<b>2</b>	<b>L-T-P:</b>	<b>0-0-3</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	Programming lab assignments related to 1. Assemblers 2. Macro assembler 3. Loader 4. Linker 5. Editor 6. Interpreter 7. Device driver 8. Kernel mode programming		
<b>Books:</b>	Text books of "System Programming"		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	

### B.Tech (Computer Engineering) - Semester V

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST301</b>	<b>Course Name:</b>	<b>Computer Architecture</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>3-0-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Flynn Classification, Stack machines, subroutine calls, allocation and evaluation of data in stack machines. SIMD, SPMD and MIMD.</p> <p>CPU Organization: Addressing techniques, Instruction formats: Instruction set design, Instruction types: example for zero address, one address, two address and three address machines, Stack, accumulator and general purpose register organization. Register Transfer Language: arithmetic, logic and shift micro operations and their hardware implementations as a simple ALU. Control Unit, Hardwired and Micro programmed control unit design.</p> <p>Memory Organization: device characteristics, RAM organization: 1D and 2D organization, Virtual memory - Paging and Segmentation, High speed memories: Associative and Cache memory.</p> <p>Input-Output Design: IO interface, Bus structure, Modes of data transfer, Interrupts, Input Output Processor, Serial Communication</p> <p>Pipelining: Pipeline structure, Pipeline types - Instruction and Arithmetic pipelines. Interleaved memory organization, instruction prefetch, data buffers, pipeline performance measures. Array processors : Routing mechanisms, Static v/s dynamic network. Multiprocessor systems, data flow concepts. Parallel processing languages.</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. J.L. Hennessy and D.A. Patterson, Computer Architecture: A Quantitative Approach, 4th Edition Elsevier.</li> <li>2. Flynn : Computer Architecture, Narosa</li> <li>3. David Culler: Parallel Computer Architecture: A Hardware/Software Approach, Morgan Kaufmann.</li> <li>4. Hwang and Briggs: Computer Architecture and Parallel Processing, McGraw-Hill.</li> </ol>		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	

**B.Tech (Computer Engineering) - Semester V**

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST303</b>	<b>Course Name:</b>	<b>Concurrent and Parallel Programming</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>3-0-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Concurrent versus sequential programming. Concurrent programming constructs and race condition. Synchronisation primitives. Processes and threads. Interprocess communication. Livelock and deadlocks, starvation, and deadlock prevention. Issues and challenges in concurrent programming paradigm and current trends.</p> <p>Parallel algorithms – sorting, ranking, searching, traversals, prefix sum etc., Parallel programming paradigms – Data parallel, Task parallel, Shared memory and message passing, Parallel Architectures, GPGPU, pthreads, STM, OpenMP, OpenCL, Cilk++, Intel TBB, CUDA</p> <p>Heterogeneous Computing: C++AMP, OpenCL</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. Mordechai Ben-Ari. Principles of Concurrent and Distributed Programming, Prentice-Hall International.</li> <li>2. Greg Andrews. Concurrent Programming: Principles and Practice, Addison Wesley.</li> <li>3. Gadi Taubenfeld. Synchronization Algorithms and Concurrent Programming, Pearson.</li> <li>4. M. Ben-Ari. Principles of Concurrent Programming, Prentice Hall.</li> <li>5. Fred B. Schneider. On Concurrent Programming, Springer.</li> <li>6. Brinch Hansen. The Origins of Concurrent Programming: From Semaphores to Remote Procedure Calls,</li> <li>7. Introduction to Parallel Computing by Ananth Grama, Anshul Gupta, George Karypis, Vipin Kumar – Pearson</li> <li>8. CUDA Programming – David Kirk</li> <li>9. Parallel Algorithms – Joseph Ja Ja</li> <li>10. Heterogeneous Computing with OpenCL by Ben Gaster, Lee Howes et al (Morgan Kaufmann)</li> </ol>

**B.Tech (Computer Engineering) - Semester V**

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST305</b>	<b>Course Name:</b>	<b>DBMS</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-1-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Need, purpose and goal of DBMS, Three tier architecture, ER Diagram, data models- Relational, Network, Hierarchical and Object Oriented.</p> <p>Data Base Design: Conceptual data base design, Theory of Normalization, Primitive and Composite data types, concept of physical and logical databases, data abstraction and data independence, data aggregation, Relational Calculus.</p> <p>SQL : DDL and DML, Relational Algebra. Application Development using SQL : Host Language interface, embedded SQL programming, Stored procedures and triggers and views, Constraints assertions.</p> <p>Internal of RDBMS : Physical data organisation in sequential, indexed random and hashed files. Inverted and multilist structures, B trees, B+ trees, Query Optimisation, Join Algorithm, Statistics and Cost Base optimisation.</p> <p>Transaction Processing, concurrency control, and recovery management. Transaction model properties and state serialisability . Lock base protocols, two phase locking.</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. H.f. Korth and Silberschatz: Database Systems Concepts, McGraw Hill</li> <li>2. Almasri and S.B. Navathe: Fundamentals of Database Systems,</li> <li>3. C.J. Date: Data Base Design, Addison Wesley</li> <li>4. Hansen and Hansen : DBM and Design, PHI</li> </ol>

**B.Tech (Computer Engineering) - Semester V**

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST307</b>	<b>Course Name:</b>	<b>Computer Networks</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>3-0-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Computer Network Architecture, Circuit switching, Packet And Message Switching, Network Structure. OSI 7-layer architecture. Physical Layer, Data Link Layer, Framing, Error detection. Retransmission algorithms. Queueing models and introduction to Little's theorem, M/M/1 and M/M/m queues. Network of queues. Introduction to M/G/1 queues, reservations and priority. Stability of queueing systems. Multiple access and Aloha. CSMA/CD and Ethernet. High Speed LANs and Token Ring. High speed switch scheduling. Broadcast routing and spanning trees. Shortest path routing. Distributed routing algorithms, optimal routing. Flow control – window/credit schemes, rate control schemes. Transport layer and TCP/IP. Introduction to ATM networks and Network Management And Interoperability. Performance Issues Of LAN And WAN.</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. Data Networks: Bertsekas and Gallager, Phi.</li> <li>2. Computer Networking A top down Approach: J.F.Kurose, Pearson.</li> <li>3. Data &amp; Computer Communication : W. Stalling , Phi</li> <li>4. Computer Networks: L. Peterson and Davie, MKP</li> <li>5. Computer Networks and Internet: D.E. Comer, Pearson</li> </ol>

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST302</b>	<b>Course Name:</b>	<b>Operating System</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>3-0-0</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Operating System and its evolution, batch, multiprogramming, time sharing systems, real time systems.</p> <p>Processes and processor management: process concept, Process scheduling, interprocess communication and synchronization, race condition, mutual exclusion, semaphores, monitors, messages. Deadlocks prevention , avoidance, detection and recovery. Processes and Threads, Concurrency control.</p> <p>Memory Management: Contiguous, partitioned – fixed and variable partitioning, Non contiguous allocation – Paging, segmentation. Virtual memory, page replacement, cache coherence.</p> <p>File management: disk space management directory structure, shared files, file system performance. File servers, security, protection mechanism, Directory and File structure, File sharing, NFS, Storage management. Input/Output Management: Device drivers, disk scheduling.</p> <p>Distributed OS: Issues, process management, inter-process communication, scheduling, deadlocks Design and implementation of distributed file systems, distributed shared memory, Distributed Concurrency, Transactions. Design issues of Distributed OS, Distributed v/s network operating system.</p>		
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. Silberschatz, Galvin: Operating System Concepts, AddisonWesley.</li> <li>2. Tanenbaum, Modern Operating Systems, Prentice Hall.</li> <li>3. W. Stallings, Operating Systems, Prentice Hall.</li> <li>4. Tanenbaum: Operating Systems: Design and Implementation. PHI.</li> <li>5. Deitel, An introduction to operating systems. Addison-Wesley.</li> <li>6. Sinha: Distributed Operating Systems: Concepts and Design, IEEE</li> <li>7. Crowley: Operating System A Design Approach-, TMH.</li> <li>8. Tanenbaum: Distributed Operating Systems, Pearson Education.</li> <li>9. Bach, Design of Unix O/S.</li> </ol>		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST306</b>	<b>Course Name:</b>	<b>Object Oriented Analysis and Design</b>
<b>Credit:</b>	<b>3</b>	<b>L-T-P:</b>	<b>3-0-0</b>
<b>Version:</b>		<b>Approved on:</b>	

<b>Pre-requisite Course :</b>		
<b>Syllabus</b>	<p>Object Oriented Programming and Design: Review of abstraction, objects and other basics, Encapsulation, Information hiding, method, Signature, Classes and Instances, Polymorphism and inheritance.</p> <p>C++ Programming Basics: Fundamentals, variables and assignments, Input and Output, Data types and expressions, flow of control, subprograms, top-down design, predefined functions, user defined functions, procedural abstractions, local variables, overloading function names, operator overloading, parameter passing, this pointer, destructors, copy constructor, overloading the assignment operator, virtual functions, function calling functions, friend functions, recursive functions, recursive member functions. Static member function.</p> <p>C++ Object oriented concepts: Objects and classes, use of file for I/O, formatting output with stream functions, Character I/O, inheritance, structures for diverse data, structures as function arguments, initializing structures, defining classes and member functions, public and private members, constructors for initialization, standard C++ classes, derived classes, flow of control, use of Boolean expressions, multiway branches, use and design of loops. Friend function and friend class.</p> <p>C++ Data structures and Advanced Topics: Arrays – programming with arrays, arrays of classes, arrays as function arguments, strings, Multidimensional arrays, Arrays of strings, pointers Dynamic arrays, Classes and dynamic arrays, Base classes, access control, Templates-generic classes and functions, namespaces. Standard Template Library.</p>	
<b>Books:</b>	<ol style="list-style-type: none"> <li>1. Balaguruswamy: Object-oriented Programming with C++.</li> <li>2. Robert Lafore: C++ Programming</li> <li>3. Ashok N. Kamthane : Object Oriented with C++, Pearson Education</li> </ol>

<b>Course Code:</b>	<b>CST433</b>	<b>Course Name:</b>	<b>Wireless Communications</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>History of wireless communication, and future trends. Wireless Generations and Standards. Cellular Concept and Cellular System Fundamentals .Trunking Cell Splitting and Sectoring. Mobile Radio signal propagation, path loss and channel models. Large Scale Path Loss. Small Scale Path Loss - Rayleigh and Rician Fading. Analog Modulation Schemes for Wireless Communication - AM/FM. Digital Modulation Techniques for Wireless Communication Preliminaries. Baseband Modulation Schemes Bandpass Modulation Techniques. Fading Counteraction – Diversity, Coding and Interleaving. Source and Channel Coding. Speech Coding for Wireless Communications. Adaptive Equalization. Multipath Propagation, Doppler. Multiplexing and Multiple Access techniques. TDMA, FDMA , ALOHA - Packet Radio, Spread Spectrum-CDMA ,Frequency Hopped Spread Spectrum, Inter-Symbol Interference (ISI), ISI mitigation; Equalization, Random Access Protocols. Wireless Networking, Wireless Standard. Third generation systems and advanced topics Wideband-CDMA, MCCDMA. OFDM principles: Comparison of OFDM and CDMA. WLAN and Bluetooth</p>		
<b>Books:</b>	<p>1. Wireless Communications: Principles and Practice, 2nd edition, T. Rappaport, Prentice Hall, 2002                  2. K. Pahlavan &amp; P. Krishnamurthy, Principles of Wireless Networks, Prentice Hall:                  3. Wireless Communications Systems, A. Goldsmith, Cambridge.</p>		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>

### B.Tech (Computer Engineering) - Program Elective

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST437</b>	<b>Course Name:</b>	<b>Neural Networks</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Neural Architecture: Neuron model, transfer function, hamming and Hopfield network, perceptron, learning rule, recurrent networks.</p> <p>Back propagation: generalized delta rule, limitations, modifications – momentum, variable learning rate, conjugate gradient.</p> <p>Learning: Supervised, associative, competitive, unsupervised learning.</p> <p>Unsupervised learning: Self-organizing maps, Adaptive Resonance Theory.</p> <p>Neural network applications: Pattern classification, function approximation</p>		

<b>Books:</b>	1.Simon Haykin: Neural Networks: A Comprehensive Foundation (2nd Edition) 2.Christopher M. Bishop: Neural Networks for Pattern Recognition 3.James A. Freeman, David M. Skapura: Neural Networks, Pearson Education. 4.Martin T. Hagan: Neural Network Design, Thomson Learning.	
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>

**B.Tech (Computer Engineering) - Program Elective**

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST439</b>	<b>Course Name:</b>	<b>Speech Recognition</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	Overview of Speech Recognition; What is Speech; Why is it important; Applications and issues. Speech Production; Mechanism of speech production; Categories of sounds; Sound units in indian languages. Nature of Speech Signal; Source-system characteristics; Segmental and suprasegmental features; Temporal and spectral parameters for sound units in indian languages. Basics of Digital Signal Processing; Signals and systems; Discrete fourier transform; Digital filtering; Stochastic processes. Speech Signal Processing Methods: Short-time spectrum analysis; Spectrograms; Linear prediction analysis; Cepstrum analysis. Speech Recognition; Isolated word recognition; Connected word recognition Continuous Speech Recognition; Speech recognition problem; Hidden markov models. Other Applications: Word spotting; Speaker recognition; Speech enhancement; Speech synthesis; Practical issues in speech Recognition.		

<b>Books:</b>	<p>1. Spoken Language Processing: A Guide to Theory, Algorithm and System Development by Xuedong Huang, Alex Acero, Hsiao-Wuen Hon, Raj Reddy Prentice Hall PTR; ISBN: 0130226165</p> <p>2. Speech Communications : Human &amp; Machine by Douglas O'Shaughnessy, IEEE Press, Hardcover 2nd edition, 1999; ISBN: 0780334493.</p> <p>3. Digital Processing of Speech Signals, Rabiner and Schafer, Prentice Hall, 1978.</p> <p>4. Fundamentals of Speech Recognition, Rabiner and Juang, Prentice Hall, 1994.</p> <p>5. Speech and Audio Signal Processing : Processing and Perception of Speech and Music by Nelson Morgan and Ben Gold, July 1999, John Wiley &amp; Sons, ISBN: 0471351547</p> <p>6. Discrete-Time Speech Signal Processing: Principles and Practice by Thomas F. Quatieri Publisher: Prentice Hall; ISBN: 013242942X; 1st edition (October 29, 2001)</p> <p>7. Speech Processing and Synthesis Toolboxes by Donald G. Childers, John Wiley &amp; Sons, September 1999; ISBN: 0471349593</p>

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST461</b>	<b>Course Name:</b>	<b>Machine Learning</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Introduction: Definition of learning systems. Goals and applications of machine learning. Aspects of developing a learning system: training data, concept representation, function approximation. Inductive Classification: The concept learning task. Concept learning as search through a hypothesis space. General-to-specific ordering of hypotheses. Finding maximally specific hypotheses. Version spaces and the candidate elimination algorithm. Learning conjunctive concepts. The importance of inductive bias. Decision Tree Learning: Representing concepts as decision trees. Recursive induction of decision trees. Overfitting, noisy data, and pruning. Ensemble Learning Using committees of multiple hypotheses. Bagging, boosting, and DECORATE. Active learning with ensembles. Experimental Evaluation of Learning Algorithms: Measuring the accuracy of learned hypotheses. Comparing learning algorithms: cross-validation, learning curves, and statistical hypothesis testing. Rule Learning: Propositional and First-Order: Translating decision trees into rules. Heuristic rule induction using separate and conquer and information gain. First-order Horn-clause induction (Inductive Logic Programming) and Foil. Learning recursive rules. Inverse resolution.</p> <p>Artificial Neural Networks: Neurons and biological motivation. Linear threshold units. Perceptrons: representational limitation and gradient descent training. Multilayer networks and back propagation. Hidden layers and constructing intermediate, distributed representations. Overfitting, learning network structure, recurrent networks.</p> <p>Bayesian Learning: Probability theory and Bayes rule. Naive Bayes learning algorithm. Parameter smoothing. Generative vs. discriminative training. Logistic regression. Bayes nets and Markov nets for representing dependencies. Instance-Based Learning: Constructing explicit generalizations versus comparing to past specific examples. k-Nearest-</p>

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST477</b>	<b>Course Name:</b>	<b>Distributed Systems</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Introduction to distributed system: characteristics. Advantages, Disadvantages. Design goals. Issues, Models of distributed systems.</p> <p>Communication in Distributed Systems: Message passing, client/server model. Remote Procedure Call. Group Communication.</p> <p>Time in distributed systems. Logical clocks. Vector clocks. Causal ordering of messages. Global state and state recording.</p> <p>Distributed Mutual Exclusion: Non-token based algorithms. Token based algorithms. Distributed elections. Transaction and concurrency control, Nested transactions, Locks, Timestamp ordering. Concurrency control in distributed transactions, Distributed deadlocks. Transaction recovery</p> <p>Replication: Motivation, Consistency and ordering. Total and causal ordering. Update protocols and voting; Distributed File Systems:</p> <p>Recovery and Fault Tolerance: Transaction recovery. Checkpointing and recovery. Fault tolerance in distributed systems. Hardware and software redundancy. Byzantine agreement.</p>		
<b>Books:</b>	<p>1. Distributed Systems: Concepts and Design, 4rd ed by Coulouris, G, Dollimore, J., and Kindberg, T., Addison-Wesley, 2006. ISBN: 0321263545</p> <p>2. Distributed Systems: Principles and Paradigms, 2nd ed by Tanenbaum, A. and van Steen, M., Prentice Hall, 2007. ISBN: 0132392275.</p>

### B.Tech (Computer Engineering) - Advanced Elective Course

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST442</b>	<b>Course Name:</b>	<b>Network Performance Modeling</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	Networking as resource sharing: current practices, Traffic Multiplexing, Traffic analysis, Stochastic Traffic Models, Multiple Access: Wireless Networks. Routing: Virtual path routing and Elastic Aggregates, Routing of Stream Type sessions, Routing in Ad-hoc and Sensor Networks. Introduction to High Performance Switching and Routing. QoS and Modeling issues of the Networks.		
<b>Books:</b>	1) Communication Networking: An Analytical Approach, Anurag Kumar, D.Manjunath, Joy Kuri, Elsevier 2) High Performance Communication Networks, Jean Walrand, P.Vaiya, Elsevier 3) Selected papers and online references.		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	

### B.Tech (Computer Engineering) - Advanced Elective Course

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST444</b>	<b>Course Name:</b>	<b>Software Testing and Validation</b>
<b>Credit:</b>	<b>2</b>	<b>L-T-P:</b>	<b>0-0-3</b>
<b>Version:</b>		<b>Approved on:</b>	

<b>Pre-requisite Course :</b>	
<b>Syllabus</b>	<p>Basic software testing principles – Software Quality, Software testing and test management.</p> <p>Acceptance Testing: User acceptance testing, alpha and beta testing.</p> <p>Functional and Non-functional system testing</p> <p>Static and dynamic testing, Black-box or functional testing, structural, white box or glass box testing.</p> <p>Integration testing, component testing.</p> <p>Software testing tools.</p> <p>Software Validation: Issues and Challenges.</p>
<b>Books:</b>	1) Selected papers and online references.
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>
	<b>SUGB Chairman</b>

<b>Course Code:</b>	<b>CST458</b>	<b>Course Name:</b>	<b>e-Commerce</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Introduction and concepts: networks and commercial transactions, the Internet environment, online commerce solutions. A generic business model for e-commerce.</p> <p>Security technologies: Introduction to cryptography, key distribution and clarification.</p> <p>Architecture for e-commerce: online commerce environment, servers and commercial environments, strategies, techniques and tools.</p> <p>Electronic payment methods: Secure online transaction models, digital payment system, cyber cash, digital currencies, Smart cash, digital purse, anonymity and authentication.</p> <p>Protocol for the public transport of private information: security protocols, secure socket layer.</p> <p>Open issues: legal and technical issues.</p>		
<b>Books:</b>	1) Pete Loshin, Paul A Murphy: Electronic e-commerce, Jaico book. 2) Paul May: The Business of e-commerce, Cambridge University Press. 3) Recent papers from conferences and journals		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	

### B.Tech (Computer Engineering) - Advanced Elective Course

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST460</b>	<b>Course Name:</b>	<b>High Level Synthesis of Digital Systems</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Overview. Design methodologies. Abstractions and views.  Review of basic concepts in algorithms and graph theory  Design representation and modeling, Modeling languages, Abstract models  Synthesis at higher levels of abstraction  Scheduling, Resource sharing  Structural synthesis: Module selection. Pipeline. Control  Synthesis at lower levels of abstraction, Logic synthesis</p>		
<b>Books:</b>	<p>1) G. D. Micheli. Synthesis and optimization of digital systems.  2) N.D. Dutt, D. D. Gajski. High level synthesis, Kluwer, 2000.  3) T. H. Cormen, C. E. Leiserson and R. L. Rivest, "Introduction to Algorithms," McGraw-Hill, 1990.  4) Recent papers from journals and conferences.</p>		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>

<b>Course Code:</b>	<b>CST462</b>	<b>Course Name:</b>	<b>Parallelizing Compiler</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Motivation and overview, structure of a parallelizing compiler. Review of code optimization techniques in compilers for sequential machines.  Parallelism detection - data dependence analysis, direction vectors, loop carried and loop independent dependences; tests for data dependence and their applicability, construction of data dependence graph. Control dependence and control dependence graph. Restructuring transformations and automatic extraction of parallelism; representation of iteration spaces of multiply nested loops; loop based transformations such as loop distribution, loop coalescing, loop inter-change and cycle shrinking transformation.</p>		

<b>Books:</b>	1) Selected papers and online reference material	
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST464</b>	<b>Course Name:</b>	<b>Public Key Infrastructure and Trust Management</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	<p>Public key infrastructure - components and architecture.          PKI interoperability, deployment and assessment          PKI data structures – certificates, validation, revocation, authentication, cross-certification.          Repository, Certification Authority (CA) and Registration Authority (RA), trusted third party, digital certificates.          PKI services – authentication, non-repudiation, privilege management, privacy, secure communication.          Key management – certificate revocation list, root CA, attacks on CA, key backup.          PKI standards – SSL, LDAP, IPSec, X.500, X.509, S/MIME          Trust models – strict v/s loose hierarchy, four corner, distributed.          Certificate path processing – path construction and path validation.</p>		
<b>Books:</b>	<p>1) Ashutosh Saxena, Public Key Infrastructure, Tata McGraw Hill          2) Carlisle Adams, Steve Lloyd. Understanding PKI: Concepts, Standards, and Deployment Considerations, Addison Wesley.          3) John R. Vacca. Public Key Infrastructure: Building Trusted Applications and Web Services, AUERBACH.          4) Messaoud Benantar, Introduction to the Public Key Infrastructure for the Internet, Pearson Education.</p>

<b>Course Code:</b>	<b>CST466</b>	<b>Course Name:</b>	<b>Selected Topics in Cryptography</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>

<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	Elliptic Curve Cryptography Secret Sharing, Threshold cryptography – Robust ElGamal system Visual Cryptography Interactive zero knowledge proofs, witness hiding protocols. Group encryption, decryption. Group signatures, ring signatures. EVoting: requirements, issues and challenges, existing solutions, write-in ballots. Pair based cryptography – Weil and Tate pairing.		
<b>Books:</b>	1) Selected paper and online reference material.		
<b>DUGC Convener</b>	<b>Curriculum committee Convener</b>	<b>SUGB Chairman</b>	

### B.Tech (Computer Engineering) - Advanced Elective Course

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST468</b>	<b>Course Name:</b>	<b>Robotics and Control</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	Robotics: Introduction to robotics, advantages, applications. Robotic kinematics and dynamics: Direct and inverse kinematics problem. Axis transformations; DH matrix; forward and reverse kinematics, trajectory planning. manipulators and their control. Robot sensors: Active and passive robot sensors, Construction of tactile, touch and vision sensors; interpretation of sensory information; vision processing; kinematic information from sensory data. Robot Intelligence: Robot learning, State space search, robotics in computer vision applications. Robotic end effectors: Stable grip; constraints; types of contact; mathematical representation of stable grip; use of screw twist, and wrench gripper design; tools as end effectors. Problems of implementation of automatic systems.		
<b>Books:</b>	1) Fu K, Gonzalez R and Lee C, Robotics - Control Sensing Vision & Intelligence, McGraw Hill. 2) Craig J J, Introduction to Robotics, Mechanics and Control, Addison Wesley, 1993. 3) McKerrow P J, Introduction to Robotics, Addison Wesley, 1993. 4) Selig M, Introductory Robotics, Prentice Hall, 1992.

<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	Introduction- Intrusion detection system (IDS), intrusion prevention system (IPS), Unauthorized access – buffer overflow, packet fragmentation, out-of-spec packets Review of Network protocol – TCP-/IP, Intrusion detection through tcpdump. IDS and IPS – Architecture and internals. Malicious and non-malicious traffic, IP headers, TDP, UPD and ICMP protocols and header formats, Header information to detect intrusion, logs and their analysis, IDS through reaction and response Intrusion analysis – data correlation, tools, SNORT		

<b>Books:</b>	1) Matt Fearnow, Stephen Northcutt, Karen Frederick, and Mark Cooper. Intrusion Signatures and Analysis, SAMS. 2) Carl Endorf, Gene Schultz, Jim Mellander, Intrusion Detection and Prevention, McGraw Hill. 3) Stephen Northcutt and Judy Novak. Network Intrusion Detection, SAMS. 4) Paul E. Proctor. The Practical Intrusion Detection Handbook, Prentice Hall.

#### B.Tech (Computer Engineering) - Advanced Elective Course

<b>UG/PG</b>	<b>UG</b>	<b>Department:</b>	<b>Computer Engineering</b>
<b>Course Code:</b>	<b>CST488</b>	<b>Course Name:</b>	<b>Internet Security</b>
<b>Credit:</b>	<b>4</b>	<b>L-T-P:</b>	<b>3-0-2</b>
<b>Version:</b>		<b>Approved on:</b>	
<b>Pre-requisite Course :</b>			
<b>Syllabus</b>	Security protocols: naming and addressing, IPv6, Network address translation, SNMP, remote login, file transfer protocol, RPC based protocol, peer-to-peer communication Web architecture and protocols, buffer overflow and hacking Internet threats – password stealing, Trojans, phishing, viruses, worms, DOS attack, backdoors, Botnets, port scanning, hacking techniques. Security mechanisms – passwords, one-time password – time based, Lamport's, authentication – smart card, biometrics, RADIUS, SASL framework, host to host authentication, PKI. Firewalls, VPNs, tunneling, Intrusion detection. Server and client security,		
<b>Books:</b>	1) John Chirillo. Hack attacks denied, Wiley. 2) McClure. Web Hacking, Pearson Education. 3) John R. Vacca. Practical Internet Security, Springer. 4) William R. Cheswick, Steven M. Bellovin, and Aviel D. Rubin. Firewalls and Internet Security: Repelling the Wily Hacker, Addison-Wesley. 5) Kenneth Einar Himma. Internet Security: Hacking, Counterhacking ,and Security, Jones & Bartlett Publishers
